Gradus XT stair edgings

Product Specified: GXT12 Stair Edging

Insert Colour Specified: Steel

Application:

Gradus XT stair edgings have been installed onto the main four-storey staircase in King Sturge's busy South West regional head office to help reduce potential slips, trips and falls.

The XT stair edgings were specified with Steel inserts to contrast with the dark blue floorcovering, helping to define the step edge in line with Approved Document M (ADM) of The Building Regulations 2000 and helping King Sturge create an inclusive environment as set out in the Equality Act 2010.

Developed in line with the latest recommendations from BRE, the XT range features slip-resistant inserts that extend around the leading edge of the step, ensuring optimum foot contact with the slip-resistant element of the stair edging. The range also comprises 55mm treads and both 40mm and 55mm risers, in line with ADM guidance.
