Project: The University of Manchester

“ Gradus LED lighting systems assist in creating safe and accessible environments for all, in line with BS8300:2009+A1:2010, Approved Document M and the Equality Act 2010. ”

Chloé Taylor  
Marketing Product Manager

Gradus Lighting supplied and installed step lighting solutions to 16 lecture theatres at The University of Manchester, Britain's largest single-site university.

In order to meet the latest guidelines on creating safe stairs, the stair edgings incorporate slip-resistant inserts in colour Glacier to provide a tonal contrast with the carpet to define the step edge in normal conditions; whilst the lighting helps students and staff to safely navigate the lecture theatres in darkened conditions.

The stair edgings have also been used to complement the streamlined and modern interior of the lecture theatres, replicating the design of the grey desks with green highlight detail onto the staircase for a co-ordinated appearance.

Gradus LED lighting systems assist in creating safe and accessible environments for all, in line with BS8300:2009+A1:2010, Approved Document M and the Equality Act 2010.
