Project: Handforth Dean, Handforth

“ I’m really pleased with the finished result and the Gradus team also did a great job carrying out the installation with minimum disruption to staff and visitors to the centre. They removed the existing matting and installed the new product, with all work carried out in just two evenings. ”

Jim Heeson  
Centre Manager for Handforth Dean

The closed construction, Topguard primary entrance matting with grey double wipers, was specified for the main entrance of the centre to help cope with the large amount of pedestrian and wheeled traffic that passes through the area each day.

Topguard is a heavy duty primary entrance matting system designed for internal use in the most demanding applications. Consisting of rubber wipers interwoven with nylon fibres and linking strips in a choice of aluminium, PVC-u or brass, Topguard is available as either open (5mm or 16mm) or closed construction, and in two thicknesses (12mm and 18mm) allowing a wide choice of product configurations to suit most applications.

#### Product Specified:

- Product Range: [Topguard](#) Primary Barrier Entrance Matting
- Wiper Colour: Grey Double Wipers
