Project: Vue Cinema, Westfield Centre, London

“ The lighting scheme from Gradus delivers on all fronts. It not only creates a safe environment, it also contributes towards the cinema’s atmosphere and customers’ enjoyment. ”

Michael Gallon
Head of Construction for Vue Entertainment

Gradus Lighting supplied and fitted comprehensive lighting systems into Vue Westfield’s 14 screens, including bespoke lighting design features. The LED systems were installed to aid way finding and the bespoke designs create attractive lighting effects.

RNT1218L Continuity stair edgings were used to define the edge of all steps in the screens, helping customers and staff to identify changes in level and reduce the risk of slips and trips on cinema stairs. Standard interior inserts in Snowdrift were chosen for their high LRV value to visually contrast with the dark floor covering.

Blue alphabetical row indicators were fitted onto the step next to each row of seats to help people to locate their seats easily, whether in the light or the dark.

Decorflex was installed inside perspex boxes to illuminate side tables and rests in between seats, as a bespoke design.

Gradus Lighting way finding systems assist cinemas in creating safe and accessible environments for all, in line with BS8300:2009, Approved Document M and Disability Discrimination Act.

Product Specified:

- [RNT1218L](#) transparent PVC-u stair edging with [Continuity](#) fibre optic rod, colour Blue
- Standard interior insert, colour Snowdrift
- [Decorflex](#), colour Blue
- [Alphabetical row indicators](#), colour Blue
