

Wall Protection

Project: The Halcon Centre

Healthcare

“ Throughout the project, Gradus worked very closely with us to realise the homely look we were after, and we are delighted with the finished design which captures exactly what we wanted. We are now looking to extend the same design throughout the building, as well as into other centres within our group. ”

Karen Ward,
Projects Officer at Somerset Care

Located near Taunton, Somerset, the Halcon Centre provides short breaks, with 24-hour professional care, for up to 18 adults who are physically disabled or have sensory loss.

SureProtect Design® bespoke wall cladding was installed in the main corridor at the centre featuring a row of imitation panels, that have been designed to look hand-drawn with a marker pen to offer the homely feel the centre was looking for. In addition, the Halcon Centre further increased the corridor walls' protection by installing Gradus's CGH5090 High Impact PVC-u Corner Guards and WGS200 Wall Guards, both in colour Gravel.

Supplied and fitted by the Gradus dedicated contracts team, the project was carried from the initial survey, through design and manufacture, to installation. The aim of the Halcon Centre was to ensure the right level of wall protection was given whilst still allowing the aesthetic style the client wanted to be created.

Gradus offer a one-to-one service, which allows us to work closely with the client to achieve the perfect solution for their Wall Protection requirements and specific design scheme. On the advice of Gradus's contracts team, the wall guards were installed at floor-level as an alternative to skirting, offering additional protection against the wheelchairs that make up much of the corridor's traffic.
